Security: A novel secure wireless video surveillance system based on Intel IXP425

network processor

Hao Yin, Chuang Lin, Berton Sebastien, Xiaowen Chu

October 2005 Proceedings of the 1st ACM workshop on Wireless multimedia networking and performance modeling WMuNeP '05

Publisher: ACM Press

Full text available: pdf(399.19 KB) Additional Information: full citation, abstract, references, index terms

This paper presents the design of a novel high-secure wireless video surveillance system. The system is based on the 802.11g ad-hoc wireless infrastructure; and the Intel IXP425 network processors are used as the basic processing unit. A media-dependant video encryption scheme, including reliable data embedding technique and real-time video encryption algorithm, has been implemented for the system to work in an open and insecure wireless environment. Our system offers several unique advantages: ...

November 2005 Proceedings of the 12th ACM conference on Computer and communications security CCS '05

Publisher: ACM Press

Full text available: pdf(239.03 KB) Additional Information: full citation, abstract, references, index terms

We investigate whether it is possible to encrypt a database and then give it away in such a form that users can still access it, but only in a restricted way. In contrast to conventional privacy mechanisms that aim to prevent any access to individual records, we aim to restrict the set of queries that can be feasibly evaluated on the encrypted database. We start with a simple form of database obfuscation which makes database records indistinguishable from lookup functions. The only feasibl ...

Session 7: content watermarking: Multimedia content screening using a dual

watermarking and fingerprinting system

Darko Kirovski, Henrique Malvar, Yacov Yacobi

December 2002 Proceedings of the tenth ACM international conference on Multimedia **MULTIMEDIA '02**

Publisher: ACM Press

Full text available: 7 pdf(262.42 KB) Additional Information: full citation, abstract, references, citings

We present a new dual watermarking and fingerprinting system, where initially all copies of a protected object are identically watermarked using a secret key, but individual detection keys are distinct. By knowing a detection key, an adversary cannot recreate the original content from the watermarked content. However, knowledge of any one detection key is sufficient for modifying the object so that a detector using that key would fail to detect the marks. Detectors using other detection keys wou ...

2 Multimedia issues in digital libraries: A quantified fidelity criterion for parameterembedded watermarking of audio archives

A. R. Gurijala, J. R. Deller

May 2003 Proceedings of the 3rd ACM/IEEE-CS joint conference on Digital libraries JCDL '03

Publisher: IEEE Computer Society

Full text available: pdf(203.18 KB) Additional Information: full citation, abstract, references, index terms

A novel algorithm for speech watermarking through parametric modeling is enhanced by inclusion of a quantified fidelity criterion. Watermarking is effected through solution of a set-membership filtering (SMF) problem, subject to an l∞ fidelity criterion in the signal space. The SMF approach provides flexibility in obtaining watermark solutions that tradeoff watermark robustness and stegosignal fidelity.
